

## SEPA CORE DIRECT DEBIT SCHEME INTER-BANK IMPLEMENTATION GUIDELINES

Abstract	This document sets out the rules for implementing Version 8.0 of the SEPA Core Direct Debit Scheme Rulebook based on Version 2009 of the inter-bank direct debit ISO 20022 XML message standards.
Document Reference	EPC114-06
Issue	Version 8.0 Approved
Date of Issue	25 November 2014
Reason for Issue	Approval for publication by the October 2014 Plenary
Reviewed by	EPC
Produced by	EPC
Authorised by	EPC
Circulation	Publicly available
Effective date	22 November 2015
Note	Changed in line with the errata to the 2014 Implementation Guidelines (IGs) and approved changes to the Rulebook effective 2015.

Pre-notice of important changes effective in 2016:

As of the effective date of November 2016 of the SEPA Core Direct Debit Rulebook version 9.0, all Collections presented for the first time, on a recurrent basis or as a one-off Collection can be presented up to D-1 Inter-Bank Business Day ( D-1).

Furthermore, the current requirement to use the sequence type 'FRST' in a first of a recurrent series of Collections is no longer mandatory as of the effective date of November 2016 of the SEPA Core Direct Debit Rulebook version 9.0 (i.e. a first Collection can be used in the same way as a subsequent Collection with the sequence type 'RCUR').

### **0.3 Purpose of Document**

The objective of these Guidelines is to define the rules to be applied to the inter-bank ISO 20022 XML message standards for the implementation of the SEPA Direct Debits as defined in the SEPA Core Direct Debit Scheme Rulebook.

## 1 INTRODUCTION

This document sets out the SEPA rules for implementing the inter-bank direct debit ISO 20022 XML message standards. The SEPA Core Direct Debit Scheme Rulebook defines data sets which are implemented in the relevant ISO 20022 XML message standard as follows.

SEPA Direct Debit Scheme Rulebook	ISO 20022 XML Message Standards
DS-01 <i>The Mandate</i>	Not applicable as this refers to the paper mandate
DS-02 <i>The dematerialised Mandate</i>	For electronic Mandate see the e-Mandate Service Implementation Guidelines
DS-04 <i>The inter-bank Collection</i>	FI to FI Customer Direct Debit (pacs.003.001.02)
DS-05 <i>Direct Debit Rejection, Return or Refund of a Collection or a Reversal</i>	Return or Refund – Payment Return (pacs.004.001.02) Reject – Payment Status Report (pacs.002.001.03)
DS-06 <i>Bank to customer Direct Debit Information</i>	Statements/advice ISO 20022 XML standards are covered separately.
DS-07 <i>The inter-bank Reversal for a Collection by the Creditor</i>	Reversal –Payment Reversal (pacs.007.001.02)
DS-08 <i>The request and response message for a claim for the Refund of an unauthorised transaction</i>	Not applicable as there is no specific XML message available
DS-09 <i>The request and response template for a claim for the Refund of an unauthorised transaction</i>	Not applicable as this refers to a paper based exchange
DS-10 <i>The request message for obtaining a copy of a Mandate</i>	Not applicable as there is no specific XML message available yet
DS-11 <i>The template for the request and the response for obtaining a copy of a Mandate</i>	Not applicable as this refers to a paper based exchange

The Guidelines for the inter-bank direct debit message standards are mandatory.

### 1.1 Coverage of the SEPA Implementation Guidelines

The purpose of the SEPA inter-bank Implementation Guidelines, hereafter referred to as the Guidelines, is to provide guidance on the use of the Global ISO 20022 XML standards in making SEPA Core payments as defined in the SEPA scheme rulebooks and supplemented by processing requirements.

The Guidelines are fully aligned to the SEPA Core requirements as defined in the Rulebook and identify message elements needed for inter-bank processing while recognising message elements that may be available for use in Additional Optional Services (AOS), as shown below.

Global ISO 20022 XML Message Standards			
Message elements from the ISO messages corresponding to Rulebook requirements	Message elements that are mandatory in the ISO messages or needed for Inter-bank Processing	Message elements from the ISO messages available for use by AOS within an EPC Governance framework	Message elements from ISO messages not applicable to SEPA
<b>EPC Implementation Guidelines for SEPA Core Mandatory subset, identifying elements</b> - to be used as defined in ISO - to be used with SEPA usage rules (from or completing the Rulebook)		To be developed and documented by AOS Communities	Not available for use in SEPA payments
SEPA Payments			

Figure 1

These Guidelines define the SEPA Core Mandatory Subset<sup>2</sup> of the Global ISO 20022 XML standard that consists of message elements:

- required in the Rulebook as business requirements
- needed for processing by banks and clearing and settlement mechanisms

These message elements define the **SEPA Core service** and are denoted by yellow shading in the message structures given in the following chapters. Only these elements are further detailed with relevant SEPA Core requirements, such as the use of the message element, its components or the values that must be used. Usage rules, for example, may indicate limits on the number of repetitions, or code value restrictions, while format rules may be used to indicate the allowable combinations of components of a message element.

These Guidelines also recognise message elements and the usage rules in the ISO 20022 XML standard that may be available for use in an AOS, subject to a governance framework to be defined by the EPC. The definition and documentation of these message elements are a matter for the AOS communities involved. These message elements are denoted by white shading.

Where there are message elements that do not apply to SEPA payments, these are denoted with red shading in the right-most column of the message structures. To date, few such message elements have been identified.

<sup>2</sup> The SEPA Core Mandatory subset is hereafter known as the SEPA Core service.

## 1.2 Use of these Guidelines by the instructing and instructed parties<sup>3</sup>

- SEPA Core payments are executed using messages only containing message elements defined as part of the SEPA Core Mandatory Subset (shaded yellow in Figure 2).
- Payments that include message elements that are defined and documented by AOS communities (shaded white in Figure 2) are considered as SEPA payments, but not as SEPA Core payments.
- It is the responsibility of the instructing bank of the message to ensure that message elements defined for use in an AOS are only included in messages sent to AOS community members.
- The instructed bank receiving a message containing AOS-related message elements, but which is not a member of the AOS community, may ignore the information, that is, not use it for processing, nor forward it to the next party in the chain. The instructed bank, however, may reject the message for this reason.

## 1.3 Notation Conventions

The Guidelines are presented in a similar format than the one used in the ISO 20022 XML standard.

#	SEPA Mul	Message Element	SEPA Core Requirements
1.00	1..1	Message root +Group Header ++Sublevel 1 +++Sublevel 2	<i>SEPA Usage Rule(s)</i> (e.g. Mandatory) <i>SEPA Format Rule(s)</i> <b>ISO Name</b> <b>ISO Definition</b> <b>XML Tag</b> <b>Type</b> (Yellow: Message Element that is part of the SEPA Core Service)
	1..1		<b>XML Tag</b> xs:choice
1.01	1..1	Message root +Group Header ++Sublevel 1 +++Sublevel 2 ++++Sublevel 3	<i>SEPA Rulebook</i> (Attribute used in Rulebook) <i>SEPA Usage Rule(s)</i> (e.g. Only 'SEPA' is allowed.) <b>ISO Name</b> <b>ISO Definition</b> <b>XML Tag</b> <b>Type</b> <b>ISO Length</b> <i>SEPA Length</i> (Yellow: Message Element that is part of the SEPA Core Service)
			<b>SEPA Code restrictions</b>
			<b>SEPA</b> <i>SingleEuroPaymentsArea</i> <i>Payment must be executed following the Single Euro Payments Area scheme.</i>

<sup>3</sup> Instructing and instructed parties include CSMs.

1.02	1..1	Message root +Group Header ++Sublevel 1 +++Sublevel 2 ++++Sublevel 3	<i>ISO Name</i> <i>ISO Definition</i> <i>XML Tag</i> <i>Type</i> (White: Message Element that is not part of the Core Service but is available for use in a SEPA AOS)
1.0n	0..1	Message root +Group Header ++Sublevel 1	<i>ISO Name</i> <i>ISO Definition</i> <i>XML Tag</i> <i>Type</i> (Red: Message Element that is not to be used in SEPA Payments)

Figure 2

Where:

- Column 1 indicates the message element Index number specific to these Implementation Guidelines. As a result, the Index numbers differ from the ones used in the relating ISO 20022 Message Definition Report, PDF version.

Components of message elements that are not allowed in SEPA payments or where no SEPA requirements are defined are not displayed in full as the ISO 20022 XML standard applies.

- Column 2 indicates the mandatory or optional status and the number of repetitions defined by the SEPA Core Requirements, e.g.:
  - 0..1 element is optional and may only be present once
  - 0..n element is optional with unlimited repetition
  - 1..1 element is mandatory and must be present exactly once
  - 1..n element is mandatory with unlimited repetition

The displayed SEPA multiplicity may thus differ from the one of the ISO 20022 XML standard. When an element is shaded yellow, possible remaining ISO 20022 occurrences are available for use in an AOS.

Empty elements are not allowed (i.e. a message shall not contain elements without content).

- Column 3 indicates the full path of an element where the last line contains the name of the message element as defined in the ISO 20022 XML standard. When an element contains sub-elements these are indented to the right and noted with a plus sign (+) per level.
- Column 4 specifies in italic characters the SEPA Core Requirements as additional rules to those specified in the ISO 20022 XML standard, which are shown in non-italic characters.
  - When defined in the Rulebook, the attribute is indicated by the attribute name and where applicable, the number, i.e., AT-*nn*. Those message elements are shaded yellow.
  - When the message element relates to inter-bank processing requirements, it is shaded yellow.
  - When the message element specified in the ISO 20022 XML standard is used for SEPA payments without change (regarding the definition and any usage rules), no specific SEPA Core requirements are provided and is shaded yellow.
  - When the message element is specified in the ISO 20022 XML standard as optional, but is mandatory in SEPA Core requirements, this is specified as ‘Mandatory’ and is shaded yellow.

- When the message element is not available for use in SEPA payments, this is indicated with red shading. Note that these message elements are similarly not available for use in an AOS.
- The SEPA length is indicated for every message element (if applicable), even if it is the same length as in the ISO 20022 XML standard.

Column 4 may also indicate conditional relationships between components of a message element, for example, either component 1 or component 2 must be present, but not both (indicated, in empty lines without index number, in the column 4 with XML Tag ‘xs:choice’). In such case, the choice is to be made between the two following sub-elements, if both are shaded yellow.

## 1.4 Character Set

The character set issue centres on the use of the full set of characters in the message elements. Two considerations are:

- While banks must be allowed to use the character set currently in use at national level,
- banks throughout SEPA cannot be required to support the full character set used in SEPA countries.

Therefore:

- The ISO 20022 XML messages allow for the full range of global language requirements (UTF-8)
- Banks must be able to support the Latin character set commonly used in international communication, as follows:

a b c d e f g h i j k l m n o p q r s t u v w x y z

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z

0 1 2 3 4 5 6 7 8 9

/ - ? : ( ) . , ' +

Space

- References, identifications and identifiers must respect the following:
  - Content is restricted to the Latin character set as defined above
  - Content must not start or end with a ‘/’
  - Content must not contain ‘//’s

However, there may be bilateral or multilateral agreements to support one or more sets of characters beyond the Latin character set referred to above.

## 1.5 General Message Element Specifications

### 1.5.1 BIC

The BIC used to identify financial institutions (Agents in the ISO 20022 XML standards) may be either BIC 11 or BIC 8.

### 1.5.2 Identifier of the Creditor (AT-02)

The Creditor is identified in the scheme by an identifier as defined below. In these Guidelines, this identifier is indicated in the ISO 20022 data element ‘Creditor Scheme Identification’. The creditor can be a legal entity, or an association that is not a legal entity, or a person.

This identifier must be stable over time, to enable the Debtor and the Debtor Bank to come back to the Creditor for Refunds and complaints, and to check the existence of a valid Mandate at the presentation of Collections by the Creditor.

The Creditor identifier has the attributes defined in the Rulebook under AT-02.

This section also applies to AT-18 ‘The identifier of the original Creditor who issued the Mandate’.

The data element is case and space insensitive.

*Format Rule:*

- Positions 1 and 2 contain the ISO country code
- Positions 3 and 4 contain the check digits
- Positions 5 to 7 contain the Creditor Business Code. When the Creditor Business Code is not used, then the value is set to ‘ZZZ’. The Creditor Business Code cannot contain spaces.
- Positions 8 up to 35 contain the country-specific identifier
- Note: the calculation of the check digit requires the following preliminary steps:
  - Disregard positions 5 to 7
  - Take the country-specific part, positions 8 to 35, and delete all non-alphanumeric characters
  - Add the ISO country code and ‘00’ to the right-hand end
  - Convert letters to digits in accordance with conversion table 1
  - Apply the check character system MOD 97-10 (see ISO 7064)

A = 10	G = 16	M = 22	S = 28	Y = 34
B = 11	H = 17	N = 23	T = 29	Z = 35
C = 12	I = 18	O = 24	U = 30	
D = 13	J = 19	P = 25	V = 31	
E = 14	K = 20	Q = 26	W = 32	
F = 15	L = 21	R = 27	X = 33	

Table 1

### 1.5.3 Mandate Identification (AT-01 Unique Mandate Reference)

This data element is case insensitive. For example: Mandate Identification 123AAa45678, 123aaA45678, 123aaa45678 and 123AAA45678 shall be considered identical.

#### 1.5.4 Optional Shorter Time Cycle (D-1)

The local instrument code 'COR1' was created to cater for an optional shorter time cycle (D-1).

***Important change: As of the effective date of November 2016 of the SEPA Core Direct Debit Rulebook version 9.0, all Collections presented for the first time, on a recurrent basis or as a one-off Collection can be presented up to D-1 Inter-Bank Business Day ( D-1).***

***Furthermore, the current requirement to use the sequence type 'FRST' in a first of a recurrent series of Collections is no longer mandatory as of the effective date of November 2016 of the SEPA Core Direct Debit Rulebook version 9.0 (i.e. a first Collection can be used in the same way as a subsequent Collection with the sequence type 'RCUR').***

#### 1.6 Implementation of ISO 20022 XML rules

This document should be read in conjunction with the ISO 20022 XML message standards.

#### 1.7 Change-Over Date

As from the change-over date, receiving banks may only receive messages, including the r-messages, in the new version.

## **2 MANDATORY BANK-TO-BANK MESSAGES**

### **2.1 Inter-bank Collection (DS-04)**

#### **2.1.1 Use of the FI to FI Customer Direct Debit (pacs.003.001.02)**

This message is used to transport the Direct Debit Collection instruction from the Creditor Bank to the Debtor Bank, directly or through intermediaries.

The message caters for bulk and single direct debit instructions.

## 2.2 Inter-bank Direct Debit Return/Refund of a Collection (DS-05)

### 2.2.1 Use of the Payment Return (pacs.004.001.02)

The Payment Return is the message used to transport the direct debit return/refund instruction from the Debtor Bank to the Creditor Bank, directly or through intermediaries. If the 'Return Originator' contains a 'Name', this means that the message is being used as a Refund. If the 'Return Originator' contains a BIC, this means that the message is being used as a Return.

This message caters for bulk and single direct debit return/refund instructions.

This message caters for Interchange Fees in the return of a collection when agreed.

**Note:** Attribute AT-R1 is implied by the Message Name, 'pacs.004.001.02' the 'Original Message Name Identification', 'pacs.003.001.02'.

**Note:** Message elements under the 'Original Transaction Reference' sequence are based on DS-04 attributes.

**Note:** The mixing of different 'Local Instrument' values under 'Original Transaction Reference' is not allowed in the same message.

## 2.2.2 Message Element Specifications

The reasons for an inter-bank **Return** specified in the Rulebook are mapped to the ISO codes as follows:

ISO Code	ISO Name	SEPA Reason as specified in the Rulebook
AC01	IncorrectAccountNumber	Account identifier incorrect (i.e. invalid IBAN)
AC04	ClosedAccountNumber	Account closed
AC06	BlockedAccount	Account blocked Account blocked for direct debit by the Debtor
AG01	TransactionForbidden	Direct debit forbidden on this account for regulatory reasons
AG02	InvalidBankOperationCode	Operation code/transaction code/sequence type incorrect, invalid file format <i>Usage Rule:</i> To be used to indicate an incorrect 'operation code/transaction code/sequence type'
AM04	InsufficientFunds	Insufficient funds
AM05	Duplication	Duplicate collection
BE05	UnrecognisedInitiatingParty	Identifier of the Creditor incorrect
FF05	InvalidLocalInstrumentCode	Direct Debit type incorrect
MD01	NoMandate	No valid Mandate
MD07	EndCustomerDeceased	Debtor deceased
MS02	NotSpecifiedReasonCustomerGenerated	Refusal by the Debtor
MS03	NotSpecifiedReasonAgentGenerated	Reason not specified
RC01	BankIdentifierIncorrect	Bank identifier incorrect (i.e. invalid BIC)
RR01	MissingDebtorAccountOrIdentification	Regulatory Reason
RR02	Missing MissingDebtorNameOrAddress	Regulatory Reason
RR03	MissingCreditorNameOrAddress	Regulatory Reason
RR04	RegulatoryReason	Regulatory Reason
SL01	DueToSpecificServiceOfferedByDebtor Agent	Specific Service offered by the Debtor Bank.

The reasons for an inter-bank Refund specified in the Rulebook are mapped to the ISO codes as follows:

ISO Code	ISO Name	SEPA Reason as specified in the Rulebook
MD01	NoMandate	Unauthorised transaction
MD06	RefundRequestByEndCustomer	Disputed authorised transaction

## 2.3 Inter-bank Direct Debit Reject Dataset (DS-05)

### 2.3.1 Use of the FI to FI Payment Status Report (pacs.002.001.03)

When the code 'RJCT' is used in 'Status Reason' the message transports the Direct Debit Rejection instruction between banks, directly or through intermediaries.

The message caters for bulk and single reject instructions.

**Note:** Attribute AT-R1 in DS-05 is implied by the 'Message Name', 'pacs.002.001.03', the 'Original Message Name Identification', 'pacs.003.001.02' and 'Status' set to 'RJCT'.

**Note:** Attribute AT-R4 'Settlement Date for the Reject, Return or Refund' is not applicable.

**Note:** Message elements under 'Original Transaction Reference' sequence are based on DS-04 attributes.

### 2.3.2 Message Element Specifications

The reasons for an inter-bank **reject** specified in the Rulebook are mapped to the ISO codes as follows:

ISO Code	ISO Name	SEPA Reason as specified in the Rulebook
AC01	IncorrectAccountNumber	Account identifier incorrect (i.e. invalid IBAN)
AC04	ClosedAccountNumber	Account closed
AC06	BlockedAccount	Account blocked Account blocked for direct debit by the Debtor
AG01	TransactionForbidden	Direct debit forbidden on this account for regulatory reasons
AG02	InvalidBankOperationCode	Operation code/transaction code/sequence type incorrect, invalid file format <i>Usage Rule:</i> To be used to indicate an incorrect 'operation code/transaction code/sequence type'
AM04	InsufficientFunds	Insufficient funds
AM05	Duplication	Duplicate collection
BE05	UnrecognisedInitiatingParty	Identifier of the Creditor Incorrect
FF01	InvalidFileFormat	Operation/transaction code incorrect, invalid file format <i>Usage Rule:</i> To be used to indicate an invalid file format.
FF05	InvalidLocalInstrumentCode	Direct Debit type incorrect
MD01	NoMandate	No valid Mandate
MD02	MissingMandatoryInformationInMandate	Mandate data missing or incorrect
MD07	EndCustomerDeceased	Debtor deceased
MS02	NotSpecifiedReasonCustomerGenerated	Refusal by the Debtor
MS03	NotSpecifiedReasonAgentGenerated	Reason not specified
RC01	BankIdentifierIncorrect	Bank identifier incorrect (i.e. invalid BIC)
RR01	MissingDebtorAccountOrIdentification	Regulatory Reason
RR02	MissingDebtorNameOrAddress	Regulatory Reason
RR03	MissingCreditorNameOrAddress	Regulatory Reason
RR04	RegulatoryReason	Regulatory Reason
SL01	DueToSpecificServiceOfferedByDebtor Agent	Specific Service offered by the Debtor Bank.
DNOR	Debtor bank is not registered	Debtor bank is not registered under this BIC in the CSM
CNOR	Creditor bank is not registered	Creditor bank is not registered under this BIC in the CSM

## 2.4 Inter-bank Reversal Instruction for a Collection (DS-07)

### 2.4.1 Use of the Payment Reversal (pacs.007.001.02)

The message is used to transport the Inter-bank Reversal Instruction for a Collection sent by the Creditor bank to the Debtor bank, directly or through intermediaries.

The message caters for bulk and single reversal instructions.

**Note:** Attribute AT-R1 in DS-07 is indicated by the 'Message Name', 'pacs.007.001.02' and the 'Original Message Name Identification', 'pacs.003.001.02'.

**Note:** Attribute AT-R2 is indicated by the combination of the Reversal 'Originator' with the Reversal 'Reason'.

**Note:** 'Original' message elements are based on DS-04 attributes.

## 2.4.2 Message Element Specifications

Reasons for an inter-bank reversal present in the Rulebook are mapped to the ISO codes as follows:

ISO Code	ISO Name	SEPA Reason as specified in the Rulebook
AM05	Duplication	Duplicate entry
MS02	NotSpecifiedReasonCustomerGenerated	Reason not specified
MS03	NotSpecifiedReasonAgentGenerated	Reason not specified

## List of changes in Core Direct Debit Interbank Implementation Guidelines Relative to v7.0

**(This list is for information – the changes in the body of the document  
are the changes in effect)**

### SYMBOLS USED

1. Column one contains the identification number of the Change
2. Column two contains the reference(s) to the relevant Index Number
3. Column three contains the reference(s) to the relevant section or message element (including full path)
4. Column four contains a description of the change
5. Column five contains a status code:
  - REJ: Rejected by the SPS WG
  - PEN: Issue pending in the SPS WG
  - ACC: Accepted by the SPS WG in Guidelines
6. Column six contains the type of change:
  - TYPO: Typing and layout errors
  - CLAR: Clarification of the text
  - CHAN: Change in or further alignment with the Rulebook content

N°	#	Section / Message Element	Description	Status	Type
14/01	N/A	0.1 References	Reference added: EPC217-08 SEPA Requirements for an Extended Character Set.	ACC	CLAR
14/02	N/A	1.3 Notation Conventions	This section was completely updated in view of the new layout of the message descriptions.	ACC	CLAR
