0.3 Purpose of Document

The objective of these Guidelines is to define the rules to be applied to the interbank ISO 20022 XML message standards for the implementation of the SEPA credit transfers as defined in the SEPA Credit Transfer Scheme Rulebook.

1 INTRODUCTION

This document sets out the SEPA rules for implementing the interbank credit transfer ISO 20022 XML message standards. The SEPA Credit Transfer Scheme Rulebook defines data sets which are implemented in the relevant ISO 20022 XML message standard as follows:

SEPA Credit Transfer Scheme Rulebook	ISO 20022 XML Message Standards
DS-02 <i>Interbank Payment Dataset</i>	FI to FI Customer Credit Transfer (pacs.008.001.02)
DS-03 <i>Reject or Return Credit Transfer Dataset</i>	Return – Payment Return (pacs.004.001.02) Reject – FI to FI Payment Status Report (pacs.002.001.03)
DS-05 <i>Recall of Credit Transfer Dataset</i>	FI to FI Payment Cancellation Request (camt.056.001.01)
DS-06 <i>Answer to Recall of Credit Transfer Dataset</i>	Negative Answer: Resolution of Investigation (camt.029.001.03) Positive Answer: Payment Return (pacs.004.001.02)
DS-07 <i>Request for Recall by the Originator Dataset</i>	FI to FI Payment Cancellation Request (camt.056.001.01)
DS-08 <i>Response to the Request for Recall by the Originator Dataset</i>	Negative Response: Resolution of Investigation (camt.029.001.03) Positive Response: Payment Return (pacs.004.001.02)
<i>Request for Status Update on a Request for Recall by the Originator (step 4C under 4.4)</i>	FI To FI Payment Status Request (pacs.028.001.01)
DS-09 <i>SCT Inquiry Dataset</i>	Claim Non-Receipt (DRAFTcamt.027.001.06) Request to Modify Payment (DRAFTcamt.087.001.05)
DS-10 <i>Response-to-SCT-Inquiry Dataset</i>	Negative/Positive Response: Resolution of Investigation (DRAFTcamt.029.001.08)
<i>Request for Status Update on a SCT Inquiry (step iii under 4.5.1)</i>	FI To FI Payment Status Request (pacs.028.001.01)

The Guidelines for the interbank credit transfer message standards are mandatory.

1.1 Coverage of the SEPA Implementation Guidelines

The purpose of the SEPA Implementation Guidelines, hereafter referred to as the Guidelines, is to provide guidance on the use of the Global ISO 20022 XML standards in making SEPA core payments as defined in the SEPA scheme rulebooks and supplemented by processing requirements.

The Guidelines are fully aligned to the SEPA core requirements as defined in the Rulebook and identify message elements needed for interbank processing while recognising message elements that may be available for use in Additional Optional Services (AOS), as shown below.

Global ISO 20022 XML Message Standards			
Message elements from the ISO messages corresponding to Rulebook requirements	Message elements that are mandatory in the ISO messages or needed for Interbank Processing	Message elements from the ISO messages available for use by AOS within an EPC Governance framework	Message elements from ISO messages not applicable to SEPA
EPC Implementation Guidelines for SEPA Core Mandatory subset, identifying elements <ul style="list-style-type: none"> - to be used as defined in ISO - to be used with SEPA usage rules (from or completing the Rulebook) Note: yellow fields can be used in a specific way for an AOS.		To be developed and documented by AOS Communities	Not available for use in SEPA payments
SEPA Payments			

Figure 1

These Guidelines define the SEPA Core Mandatory Subset² of the Global ISO 20022 XML standard that consists of message elements:

- required in the Rulebook as business requirements
- needed for processing by banks and clearing and settlement mechanisms

These message elements define the **SEPA core service** and are denoted by yellow shading in the message structures given in the following chapters. Only these elements are further detailed with relevant SEPA core requirements, such as the use of the message element, its components or the values that must be used. Usage rules, for example, may indicate limits on the number of repetitions, or code value restrictions, while format rules may be used to indicate the allowable combinations of components of a message element.

These Guidelines also recognise message elements and the usage rules in the ISO 20022 XML standard that may be available for use in an AOS, subject to a governance framework to be defined by the EPC. The definition and documentation of these message elements are a matter for the AOS communities involved. These message elements are denoted by white shading.

Where there are message elements that do not apply to SEPA payments, these are denoted with red shading in the right-most column of the message structures. To date, few such message elements have been identified.

² The SEPA Core Mandatory Subset is hereafter known as the SEPA core service.

1.2 Use of these Guidelines by the instructing and instructed parties³

- SEPA core payments are executed using messages only containing message elements defined as part of the SEPA Core Mandatory Subset (shaded yellow in Figure 2).
- Payments that include message elements that are defined and documented by AOS communities (shaded white/yellow in Figure 2) are considered as SEPA payments, but not as SEPA core payments.
- It is the responsibility of the instructing bank of the message to ensure that message elements defined for use in an AOS are only included in messages sent to AOS community members.
- The instructed bank receiving a message containing AOS-related message elements, but which is not a member of the AOS community, may ignore the information, that is, not use it for processing, nor forward it to the next party in the chain. The instructed bank, however, may reject the message for this reason.

1.3 Notation Conventions

The Guidelines are presented in a similar format than the one used in the ISO 20022 XML standard.

#	SEPA Mul	Message Element	SEPA Core Requirements

Figure 2

Where:

- Column 1 indicates the message element Index number specific to these Implementation Guidelines. As a result, the Index numbers differ from the ones used in the relating ISO 20022 Message Definition Report, PDF version.
- Components of message elements that are not allowed in SEPA payments or where no SEPA requirements are defined are not displayed in full as the ISO 20022 XML standard applies.
- Column 2 indicates the mandatory or optional status and the number of repetitions defined by the SEPA Core Requirements, e.g.:
 - 0..1 element is optional and may only be present once
 - 0..n element is optional with unlimited repetition
 - 1..1 element is mandatory and must be present exactly once
 - 1..n element is mandatory with unlimited repetition

The displayed SEPA multiplicity may thus differ from the one of the ISO 20022 XML standard. When an element is shaded yellow, possible remaining ISO 20022 occurrences are available for use in an AOS.

Empty elements are not allowed (i.e. a message shall not contain elements without content).

- Column 3 indicates the full path of an element where the last line contains the name of the message element as defined in the ISO 20022 XML standard. When an element contains sub-elements these are indented to the right and noted with a plus sign (+) per level.
- Column 4 specifies in italic characters the SEPA Core Requirements as additional rules to those specified in the ISO 20022 XML standard, which are shown in non-italic characters.
 - When defined in the Rulebook, the attribute is indicated by the attribute name and where applicable, the number, i.e., AT-*nn*. Those message elements are shaded yellow.
 - When the message element relates to interbank processing requirements, it is shaded yellow.
 - When the message element specified in the ISO 20022 XML standard is used for SEPA payments without change (regarding the definition and any usage rules), no specific SEPA Core requirements are provided and is shaded yellow.

- When the message element is specified in the ISO 20022 XML standard as optional, but is mandatory in SEPA Core requirements, this is specified as 'Mandatory' and is shaded yellow.
- When the message element is not available for use in SEPA payments, this is indicated with red shading. Note that these message elements are similarly not available for use in an AOS.
- The SEPA length is indicated for every message element (if applicable), even if it is the same length as in the ISO 20022 XML standard.

Column 4 may also indicate conditional relationships between components of a message element, for example, either component 1 or component 2 must be present, but not both (indicated, in empty lines without index number, in the column 4 with XML Tag 'xs:choice'). In such case, the choice is to be made between the two following sub-elements, if both are shaded yellow.

1.4 Character Set

The character set issue centres on the use of the full set characters in the message elements. Two considerations are:

- While banks must be allowed to use the character set currently in use at national level,
- banks throughout SEPA cannot be required to support the full character set used in SEPA countries.

Therefore:

- The ISO 20022 XML messages allow for the full range of global language requirements (UTF-8).
- Banks must be able to support the Latin character set commonly used in international communication, as follows:
a b c d e f g h i j k l m n o p q r s t u v w x y z
A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
0 1 2 3 4 5 6 7 8 9
/ - ? : () . , ' +
Space
- References, identifications and identifiers must respect the following [9]:
 - Content is restricted to the Latin character set as defined above
 - Content must not start or end with a '/'
 - Content must not contain '//'

However, there may be bilateral or multilateral agreements to support one or more sets of characters beyond the Latin character set referred to above.

1.5 General Message Element Specifications

1.5.1 BIC

The BIC used to identify financial institutions (Agents in the ISO 20022 XML standards) may be either BIC 11 or BIC 8.

Depending on the version of the ISO 20022 message used, the BIC of a financial institution may be populated either in a <BIC> or in a <BICFI> element (for the pacs.028 message).

1.6 Implementation of ISO 20022 XML rules

This document should be read in conjunction with the ISO 20022 XML message standards.

1.7 Change Over Date

As from the change-over date, receiving banks may only receive messages, including the r-messages, in the new version.

2 MANDATORY BANK-TO-BANK MESSAGES

2.1 Interbank Payment Dataset (DS-02)

2.1.1 Use of FI to FI Customer Credit Transfer (pacs.008.001.02)

The message is used to transport the Payment instruction from the Originator Bank to the Beneficiary Bank, directly or through intermediaries.

The message caters for bulk and single payment instructions.

	1..1	Claim Non Receipt V06	ISO Name ISO Definition	Claim Non Receipt V06 Scope The Claim Non Receipt message is sent by a case creator/case assigner to a case assignee. This message is used to initiate an investigation for missing funds at the creditor (missing credit entry to its account) or at an agent along the processing chain (missing cover for a received payment instruction). Usage The claim non receipt case occurs in two situations: - The creditor is expecting funds from a particular debtor and cannot find the corresponding credit entry on its account. In this situation, it is understood that the creditor will contact its debtor, and that the debtor will trigger the claim non receipt case on its behalf. A workflow where the creditor directly addresses a Claim Non Receipt message to its account servicing institution is not retained. - An agent in the processing chain cannot find a cover payment corresponding to a received payment instruction. In this situation, the agent may directly trigger the investigation by sending a Claim Non Receipt message to the sender of the original payment instruction. The Claim Non Receipt message covers one and only one payment instruction at a time. If several expected payment instructions/cover instructions are found missing, then multiple Claim Non Receipt messages must be sent.

2.15 Interbank Negative Response to Claim for Value Date Correction (DS-10)

2.15.1 Use of Resolution of Investigation (DRAFTcamt.029.001.08)

This message is to be used to transmit a negative response to a Claim for Value Date Correction message (Request To Modify Payment, DRAFTcamt.087.001.05).

Note: The use case of the message is implied by the 'Message Name' set to 'DRAFTcamt.029.001.08', the Original Message Name Identification set to 'pacs.008.001.02' and 'Status' set to either 'RJVA' (Rejected Value Date Adjustment) or 'CVAA' (Correct Value Date Already Applied).

Note: Message elements under 'Original Transaction Reference' sequence are based on DS-02 attributes.

Note: A negative response implies that a Claim for Value Date Correction is rejected by the receiving party.

In the context of a Claim for Value Date Correction, the message caters for a single response only.

Note: DRAFTcamt.029.001.08 is currently a 'candidate' ISO 20022 message and as such it is still under review. The EPC has also submitted a change request to add external codes 'RJVA' and 'CVAA', which still needs to be approved.
