SEPA Request-To-Pay (SRTP)

Inter-RTP Service Provider SRTP Enrolment and Activation Implementation Guidelines

EPC254-23 / Version 1.0 / Date issued: 22 December 2023 / Date effective: 22 December 2023

Abstract
This document sets out the rules for implementing the activation processes as described in version 3.2 of the SEPA Request-to-Pay (SRTP) Scheme Rulebook based on relevant ISO 20022 XML message standards.

0.3   Purpose of Document

The objective of these Guidelines is to define the rules to be applied to the ISO 20022 XML message standards for the implementation of the SEPA Request-to-Pay (SRTP) Activation messages in the Inter-SRTP Service Provider space.

---

1   Introduction

The following table maps the datasets as defined in the SRTP Rulebook to the relevant ISO 20022 XML message standard:

SEPA Request-to-Pay (SRTP) Rulebook Datasets	ISO 20022 XML Message Standards
DSO-06 Payee's to Payer's RTP Service Provider RTP Activation Request DSO-22 Payer's to Payee's RTP Service Provider RTP Activation Request	RequestToPayDebtorActivationRequestV01 (reda.070.001.01)
DSO-09 Payee's to Payer's RTP Service Provider RTP Activation Amendment Request DSO-25 Payer's to Payee's RTP Service Provider RTP Activation Amendment Request	RequestToPayDebtorActivationAmendment RequestV01 (reda.071.001.01)
DSO-12 Payee's to Payer's RTP Service Provider RTP Activation Cancellation Request DSO-28 Payer's to Payee's RTP Service Provider RTP Activation Cancellation Request	RequestToPayDebtorActivationCancellation RequestV01 (reda.072.001.01)
DSO-15 Payer's to Payee's RTP Service Provider RTP Activation/Amendment/ Cancellation Status Report DSO-31 Payee's to Payer's RTP Service Provider RTP Activation/Amendment/ Cancellation Status Report	RequestToPayDebtorActivationStatusReportV01 (reda.073.001.001.01)

The Guidelines for the Activation related XML message standard are optional. This means that the SRTP Service Providers can bilaterally decide whether to use these messages or not, and these messages may be rejected if sent to an SRTP Service Provider which does not support this option.

1.1   Coverage of the SRTP Activation Implementation Guidelines

The purpose of the SRTP Activation Implementation Guidelines, hereafter referred to as the Guidelines, is to provide guidance on the use of the ISO 20022 XML message standards for SRTP Activation related messages as defined in the SRTP scheme rulebook.

The Guidelines are fully aligned to the SEPA core requirements when defined in the rulebook and identify message elements needed for SRTP related Activation processes while recognising message elements that may be available for use in Additional Optional Services (AOS), as shown below.

Global ISO 20022 XML Message Standards			
Message elements from the ISO messages corresponding to rulebook requirements	**Message elements that are mandatory in the ISO messages or needed for processing**	**Message elements from the ISO messages available for use by AOS within an EPC governance framework**	**Message elements from ISO messages not applicable to SEPA**
EPC implementation guidelines for SEPA Core subset, identifying elements - **to be used as defined in ISO** - **to be used with SEPA usage rules (from or completing the Rulebook)** **Note: yellow fields can be used in a specific way for an AOS.**		**To be developed and documented by AOS Communities**	**Not available for use in SEPA**
SEPA Request-to-Pay Enrolemnet and Activation			

Figure 1

These Guidelines define the SEPA Core Mandatory Subset[2] of the global ISO 20022 XML standard that consists of message elements:

- required in the rulebook as business requirements

- needed for processing by SRTP Service Providers and customers of SRTP Service Providers

Elements needed for specific national regulatory requirements are not considered in these guidelines. They have to be dealt with at national level without being regarded as an AOS.

These message elements define the **SEPA core service** and are denoted by yellow shading in the message structures given in the following chapters. Only these elements are further detailed with relevant SEPA core requirements, such as the use of the message element, its components or the values that must be used. Usage rules, for example, may indicate limits on the number of repetitions, or code value restrictions, while format rules may be used to indicate the allowable combinations of components of a message element.

These Guidelines also recognise message elements and the usage rules in the ISO 20022 XML standard that may be available for use in an AOS, subject to a governance framework to be defined by the EPC. The definition and documentation of these message elements are a matter for the AOS communities involved. These message elements are denoted by white shading.

Where there are message elements that do not apply to SRTP Activation, these are denoted with red shading in the right-most column of the message structures. To date, few such message elements have been identified.

---

[2] The SEPA Core Mandatory Subset is hereafter known as the SEPA core service.

1.2   Use of these Guidelines by the SRTP Service Providers

- SEPA core SRTP Activations are executed using messages only containing message elements defined as part of the SEPA Core Subset (shaded yellow in Figure 2).

- SRTP Activation messages that include message elements that are defined and documented by AOS communities (shaded white/yellow in Figure 2) are considered as SRTP Activation, but not as SEPA core SRTP Activation.

- It is the responsibility of every SRTP Service Provider to ensure that message elements defined for use in an AOS are only included in messages sent to AOS community members.

- An SRTP Service Provider receiving a message containing AOS message elements, but which is not a member of this AOS community, may ignore the information, that is, not use it for processing, nor forward it to the next party in the chain (if applicable). This SRTP Service Provider, however, may reject the message for this reason.

- SRTP Service Providers that do not support the optional SRTP Activation messages can reject these messages.

1.3   Notation Conventions

The Guidelines are presented in a similar format than the one used in the ISO 20022 XML message standard.

#	SEPA Mul	Message Element	SEPA Core Requirements
1.00	1..1	Message root +Group Header ++Sublevel 1 +++Sublevel 2	*SEPA Usage Rule(s)*　　　　*(e.g. Mandatory)* *SEPA Format Rule(s)* **ISO Name** **ISO Definition** **XML Tag** **Type** (Yellow: Message Element that is part of the SEPA core service)
	1..1		**XML Tag**　　　xs:choice
1.01	1..1	Message root +Group Header ++Sublevel 1 +++Sublevel 2 ++++Sublevel 3	*SEPA Rulebook*　　　*(Attribute used in Rulebook)* *SEPA Usage Rule(s)*　　*(e.g. Only 'SEPA' is allowed.)* **ISO Name** **ISO Definition** **XML Tag** **Type** **ISO Length** *SEPA Length* (Yellow: Message Element that is part of the SEPA core service) ***SEPA Code restrictions*** ***SEPA***　　　SingleEuroPaymentsArea *Payment must be executed following the Single Euro Payments Area scheme.*
1.02	1..1	Message root +Group Header ++Sublevel 1 +++Sublevel 2 ++++Sublevel 3	**ISO Name** **ISO Definition** **XML Tag** **Type** (White: Message Element that is not part of the core service but is available for use in a SEPA AOS)
1.0n	0..1	Message root +Group Header ++Sublevel 1	**ISO Name** **ISO Definition** **XML Tag** **Type** (Red: Message Element that is not availble for use in SEPA)

Figure 2

Where:

- Column 1 indicates the message element index number specific to these Guidelines. As a result, the index numbers differ from the ones used in the relating ISO 20022 Message Definition Report, PDF version.

  Components of message elements that are not allowed in SRTP Activation or where no SEPA Core Requirements are defined are not displayed in full as the ISO 20022 XML standard applies.

- Column 2 indicates the mandatory or optional status and the number of repetitions defined by the SEPA Core Requirements, e.g.:

  - o 0..1 element is optional and may only be present once
  - o 0..n element is optional with unlimited repetition

- o 1..1 element is mandatory and must be present exactly once
- o 1..n element is mandatory with unlimited repetition

The displayed 'SEPA multiplicity' may thus differ from the one of the ISO 20022 XML message standard. When an element is shaded yellow, possible remaining ISO 20022 occurrences are available for use in an AOS.

Empty elements are not allowed (i.e. a message shall not contain elements without content).

- • Column 3 indicates the full path of an element where the last line contains the name of the message element as defined in the ISO 20022 XML message standard. When an element contains sub-elements, these are indented to the right and noted with a plus sign (+) per level.

- • Column 4 specifies in italic characters the SEPA Core Requirements as additional rules to those specified in the ISO 20022 XML message standard, which are shown in non-italic characters.

  - o When defined in the Rulebook, the attribute is indicated by the attribute name and where applicable, the number, i.e., AT-nnnn. Those message elements are shaded yellow.

  - o When the message element specified in the ISO 20022 XML message standard is used for SRTP Activation without change (regarding the definition and any usage rules), no specific SEPA Core requirements are provided and is shaded yellow.

  - o When the message element is specified in the ISO 20022 XML message standard as optional, but is mandatory in SEPA Core requirements, this is specified as 'Mandatory' and is shaded yellow.

  - o When the message element is not available for use in SRTP Activation, this is indicated with red shading. Note that these message elements are similarly not available for use in an AOS.

  - o The SEPA length is indicated for every message element (if applicable), even if it is the same length as in the ISO 20022 XML standard.

Column 4 may also indicate conditional relations between message components or elements, e.g. either component 1 or component 2 must be present, component 1 and component 2 are mutually exclusive. For XML Tag "xs:choice" (containing just one subsequent component or element due to applied restrictions on subsequent components or elements), column 4 may indicate that the "choice" nature is lost due to applied restrictions i.e. only one element is shaded yellow.

1.4   Character Set

The character set issue centres on the use of the full set characters in the message elements. Two considerations are:

- • While SRTP Service Providers and their customers must be allowed to use the character set currently in use at national level,

- • SRTP Service Providers and their customers throughout SEPA cannot be required to support the full character set used in SEPA countries.

Therefore:

- The ISO 20022 XML messages allow for the full range of global language requirements (UTF-8).

- SRTP Service Providers and their customers must be able to support the Latin character set commonly used in international communication, as follows:

  a b c d e f g h i j k l m n o p q r s t u v w x y z
  A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
  0 1 2 3 4 5 6 7 8 9
  / - ? : ( ) . , ' +
  Space

- References, identifications and identifiers must respect the following [8]:

  o Content is restricted to the Latin character set as defined above

  o Content must not start or end with a '/'

  o Content must not contain '//'

However, there may be bilateral or multilateral agreements to support one or more sets of characters beyond the Latin character set referred to above.

1.5   General Message Element Specifications

1.5.1   BIC

The BIC used to identify financial institutions (Agents in the ISO 20022 XML standards) may be either BIC 11 or BIC 8.

1.6   Implementation of ISO 20022 XML rules

This document should be read in conjunction with the ISO 20022 XML message standards.

2 Optional Inter-SRTP Service Provider Activation messages

This document describes all the SRTP Activation related messages that are exchanged between the Payee's and Payer's RTP Service Provider (in both directions).

Important Note:

The ISO 20022 activation related messages (reda.070 – reda.073) were created to accommodate the activation of Payers (Debtors) only. As the SRTP rulebook also covers the possibility to 'activate' Payees (Creditors), it means that the ISO 20022 activation messages will be used in the context of the SRTP Enrolment & Activation IGs for the activation of both the Payer and Payee. In the activation related messages there are however separate message elements for Debtor and Creditor, which can be used to respectively provide the details of the Payer and Payee (irrespective of whether the activation relates to a Payer or Payee). However, in case of a Payee's activation, every time the term "Creditor" is used in ISO definitions of these messages, it is to be understood as referring to the Payer. Conversely, when "Debtor" is used, it is to be understood as referring to the Payee.

2.1 Payer's to Payee's RTP Service Provider RTP Activation Request Dataset (DSO-22)

This dataset and the message description below correspond with line '1- Act-01' in Annex 'Overview of functional activation flows'.

2.1.1 Use of the Request To Pay Debtor Activation Request (reda.070.001.01)

The Payer's RTP Service Provider sends the RTP Activation Request to the Payee's RTP Service Provider.

The message caters for one single Activation Request.

The following should be noted:

- Index 1.1 'Message Identification' must start with "PAYER/".
- The Payer (or a technical provider of the Payer) is identified as the 'Initiating Party' of the Activation Request.
- Index 2.48 'Debtor Solution Provider/Identification' to be populated with AT-N001 'Identifier of the Payer's RTP Service Provider'.
- Index 2.62 'Customer Identification' to be populated with AT-B028 'Identification of the Payer expected by the Payee'.
- Index 2.112 'Activation Request Delivery Party/Identification' is to be populated with the Payee's SRTP address, which is the combination of AT-E005 'Payee's identification code' and AT-N002 'Identifier of the Payee's RTP Service Provider'. Depending on whether the Payee is a corporate or natural person, data element 'Activation Request Delivery Party/ Identification/Organisation Identification' or 'Activation Request Delivery Party/Identificat ion/Private Identification' is to be used.
- When a SEPA Usage Rule refers to "DSO-21", please consider that this message is covered under document 'EPC255-23 Payer-Payer's RTP SP SRTP E&A IG 2023 V1.0'.

2.2   Payee's to Payer's RTP Service Provider RTP Activation Request Dataset (DSO-06)

This dataset and the message description below correspond with line '1 - ActA-01' in Annex 'Overview of functional activation flows'.

2.2.1   Use of the Request To Pay Debtor Activation Request (reda.070.001.01)

The Payee's RTP Service Provider sends the RTP Activation Request to the Payer's RTP Service Provider.

The message caters for one single Activation Request.

The following should be noted:

- Index 1.1 'Message Identification' must start with "PAYEE/".
- The Payee (or a technical provider of the Payee) is identified as the 'Initiating Party' of the Activation Request.
- Index 2.48 'Debtor Solution Provider/Identification' to be populated with AT-N002 'Identifier of the Payee's RTP Service Provider'.
- Index 2.62 'Customer Identification' to be populated with AT-B036 'Identification of the Payee expected by the Payer'.
- Index 2.112 'Activation Request Delivery Party/Identification' is to be populated with the Payer's SRTP address, which is the combination of AT-P009 'Identifier of the Payer' and AT-N001 'Identifier of the Payer's RTP Service Provider'. Depending on whether the Payer is a corporate or natural person, data element 'Activation Request Delivery Party/ Identification/Organisation Identification' or 'Activation Request Delivery Party/Identificat ion/Private Identification' is to be used.
- When a SEPA Usage Rule refers to "DSO-05", please consider that this message is covered under document 'EPC253-23 Payee-Payee's RTP SP SRTP E&A IG 2023 V1.0'.

2.3 Payer's to Payee's RTP Service Provider RTP Activation Amendment Request Dataset (DSO-25)

This dataset and the message description below correspond with line '3 - ActA-02' in Annex 'Overview of functional activation flows'.

2.3.1 Use of the Request To Pay Debtor Activation Amendment Request (reda.071.001.01)

The Payer's RTP Service Provider sends an RTP Activation Amendment Request to the Payee's RTP Service Provider.

The message caters for one single Activation Amendment Request.

The following should be noted:

- Index 1.1 'Message Identification' must start with "PAYER/".
- The Payer (or a technical provider of the Payer) is identified as the 'Initiating Party' of the Activation Amendment Request.
- Index 2.1 'Original Business Instruction' can refer to information from the orginal reda.070 or reda.071 (in case of a previous amendment).
- Index 2.32 'Reason/Code' (under 'Amendment Reason') to be populated only with ISO code "CUST" (Requested by Customer).
- Index 2.35 'Amendment': The underlying message elements must be exactly the same as the message elements provided under 'Amendment' in DSO-24 'Payer to Payer's RTP Service Provider RTP Activation Amendment Request Dataset' (EPC255-23).
- Index 2.177 'Original Activation Data': The underlying message elements must be the same as the mandatory message elements - and where applicable the optional message elements to be changed (if data element available) - of the original activation request 'reda.070' message, populated either with the value of the original reda.070 or when applicable with the value updated in a subsequent reda.071 message, according to the information given under element 'Message Name Identification'.

2.4   Payee's to Payer's RTP Service Provider Activation Amendment Request Dataset (DSO-09)

This dataset and the message description below correspond with line '3 - ActA-02' in Annex 'Overview of functional activation flows'.

2.4.1   Use of the Request To Pay Debtor Activation Amendment Request (reda.071.001.01)

The Payee's RTP Service Provider sends an RTP Activation Amendment Request to the Payer's RTP Service Provider.

The message caters for one single Activation Amendment Request.

The following should be noted:

- Index 1.1 'Message Identification' must start with "PAYEE/".
- The Payee (or a technical provider of the Payee) is identified as the 'Initiating Party' of the Activation Amendment Request.
- Index 2.1 'Original Business Instruction' can refer to information from the orginal reda.070 or reda.071 (in case of a previous amendment).
- Index 2.32 'Reason/Code' (under 'Amendment Reason') to be populated only with ISO code "CUST" (Requested by Customer).
- Index 2.35 'Amendment': The underlying message elements must be exactly the same as the message elements provided under 'Amendment' in DSO-08 'Payee to Payee's RTP Service Provider RTP Activation amendment request' (EPC253-23).
- Index 2.177 'Original Activation Data': The underlying message elements must be the same as the mandatory message elements - and where applicable the optional message elements to be changed (if data element available) - of the original activation request 'reda.070' message, populated either with the value of the original reda.070 or when applicable with the value updated in a subsequent reda.071 message, according to the information given under element 'Message Name Identification'.

2.5 Payer's to Payee's RTP Service Provider RTP Activation Cancellation Request Dataset (DSO-28)

This dataset and the message description below correspond with line '5 - ActC-03' in Annex 'Overview of functional activation flows'.

2.5.1 Use of the Request To Pay Debtor Activation Cancellation Request (reda.072.001.01)

The Payer's RTP Service Provider sends an RTP Activation Cancellation Request to the Payee's RTP Service Provider.

The message caters for one single Activation Cancellation Request.

The following should be noted:

- Index 1.1 'Message Identification' must start with "PAYER/".
- The Payer (or a technical provider of the Payer) is identified as the 'Initiating Party' of the Activation Cancellation Request.
- Index 2.32 'Reason/Code' (under 'Cancellation Reason') to be populated only with ISO code "CUST" (Requested by Customer).
- When a SEPA Usage Rule refers to "DSO-27", please consider that this message is covered under document 'EPC255-23 Payer-Payer's RTP SP SRTP E&A IG 2023 V1.0'.

2.6   Payee's to Payer's RTP Service Provider RTP Activation Cancellation Request Dataset (DSO-12)

This dataset and the message description below correspond with line '5 - ActC-03' in Annex 'Overview of functional activation flows'.

2.6.1   Use of the Request To Pay Debtor Activation Cancellation Request (reda.072.001.01)

The Payee's RTP Service Provider sends an RTP Activation Cancellation Request to the Payer's RTP Service Provider.

The message caters for one single Activation Cancellation Request.

The following should be noted:

- Index 1.1 'Message Identification' must start with "PAYEE/".
- The Payee (or a technical provider of the Payee) is identified as the 'Initiating Party' of the Activation Cancellation Request.
- Index 2.32 'Reason/Code' (under 'Cancellation Reason') to be populated only with ISO code "CUST" (Requested by Customer).
- When a SEPA Usage Rule refers to "DSO-11", please consider that this message is covered under document 'EPC253-23 Payee-Payee's RTP SP SRTP E&A IG 2023 V1.0'.

2.7 Payee's to Payer's RTP Service Provider RTP Activation/Amendment/Cancellation Status Report Dataset (DSO-31)

This dataset and the message description below correspond with lines '2 - Act-01 SR', '4 – ActA-02 SR' and '6 - ActC-03 SR' in Annex 'Overview of functional activation flows'.

2.7.1 Use of the Request To Pay Debtor Activation Status Report (reda.073.001.01)

The Payee's RTP Service Provider sends an RTP Activation Status Report to the Payer's RTP Service Provider to inform about the acceptance or rejection of an Activation Request, Activation Amendment Request or Activation Cancellation Request (as orginally sent by the Payer).

The message caters for one single Activation/Amendment/Cancellation Status Report.

The following should be noted:

- The Payee (or a technical provider of the Payee) is the 'Initiating Party'.
- Index 2.3 'Message Name Identification' must refer to reda.070, reda.071 or reda.072.
- Index 2.8 'Status Reason' must only be used in case "RJCT" (Rejected) is provided under Index 2.6 'Status/Code'.
- Index 2.40 'Original Activation Data': The underlying message elements must be populated with the same value as in the message elements of the original instruction (reda.070, reda.071 or reda.072) to which this status report refers to, according to the information given under 'Message Name Identification'.
- Index 2.55 'Effective Activation Date' (under 'Original Activation And Status') is mandatory if "ACPT" is provided under index 2.6 'Status/Code'.

2.8 Payer's to Payee's RTP Service Provider RTP Activation/Amendment/Cancellation Status Report Dataset (DSO-15)

This dataset and the message description below correspond with lines '2 - Act-01 SR', '4 – ActA-02 SR' and '6 - ActC-03 SR' in Annex 'Overview of functional enrolment flows'.

2.8.1 Use of the Request To Pay Debtor Activation Status Report (reda.073.001.01)

The Payer's RTP Service Provider sends an RTP Activation Status Report to the Payee's RTP Service Provider to inform about the acceptance or rejection of an Activation Request, Activation Amendment Request or Activation Cancellation Request (as orginally sent by the Payee).

The message caters for one single Activation/Amendment/Cancellation Status Report.

The following should be noted:

- The Payer (or a technical provider of the Payer) is the 'Initiating Party'.
- Index 2.3 'Message Name Identification' must refer to reda.070, reda.071 or reda.072.
- Index 2.8 'Status Reason' must only be used in case "RJCT" (Rejected) is provided under Index 2.6 'Status/Code'.
- Index 2.40 'Original Activation Data': The underlying message elements must be populated with the same value as in the message elements of the original instruction (reda.070, reda.071 or reda.072) to which this status report refers to, according to the information given under 'Message Name Identification'.
- Index 2.55 'Effective Activation Date' (under 'Original Activation And Status') is mandatory if "ACPT" is provided under index 2.6 'Status/Code'.
